

Microsoft Azure Training Day: Modernizing Web Applications and Data

Enhancing Web Applications with Cloud Intelligence

Melony Qin
Cloud Solution Architect

Extending Tailwind with the power of the Cloud

Agenda

Introduction to serverless

Add enterprise messaging to your app

Enhance your app with integrations

Plug into cloud intelligence

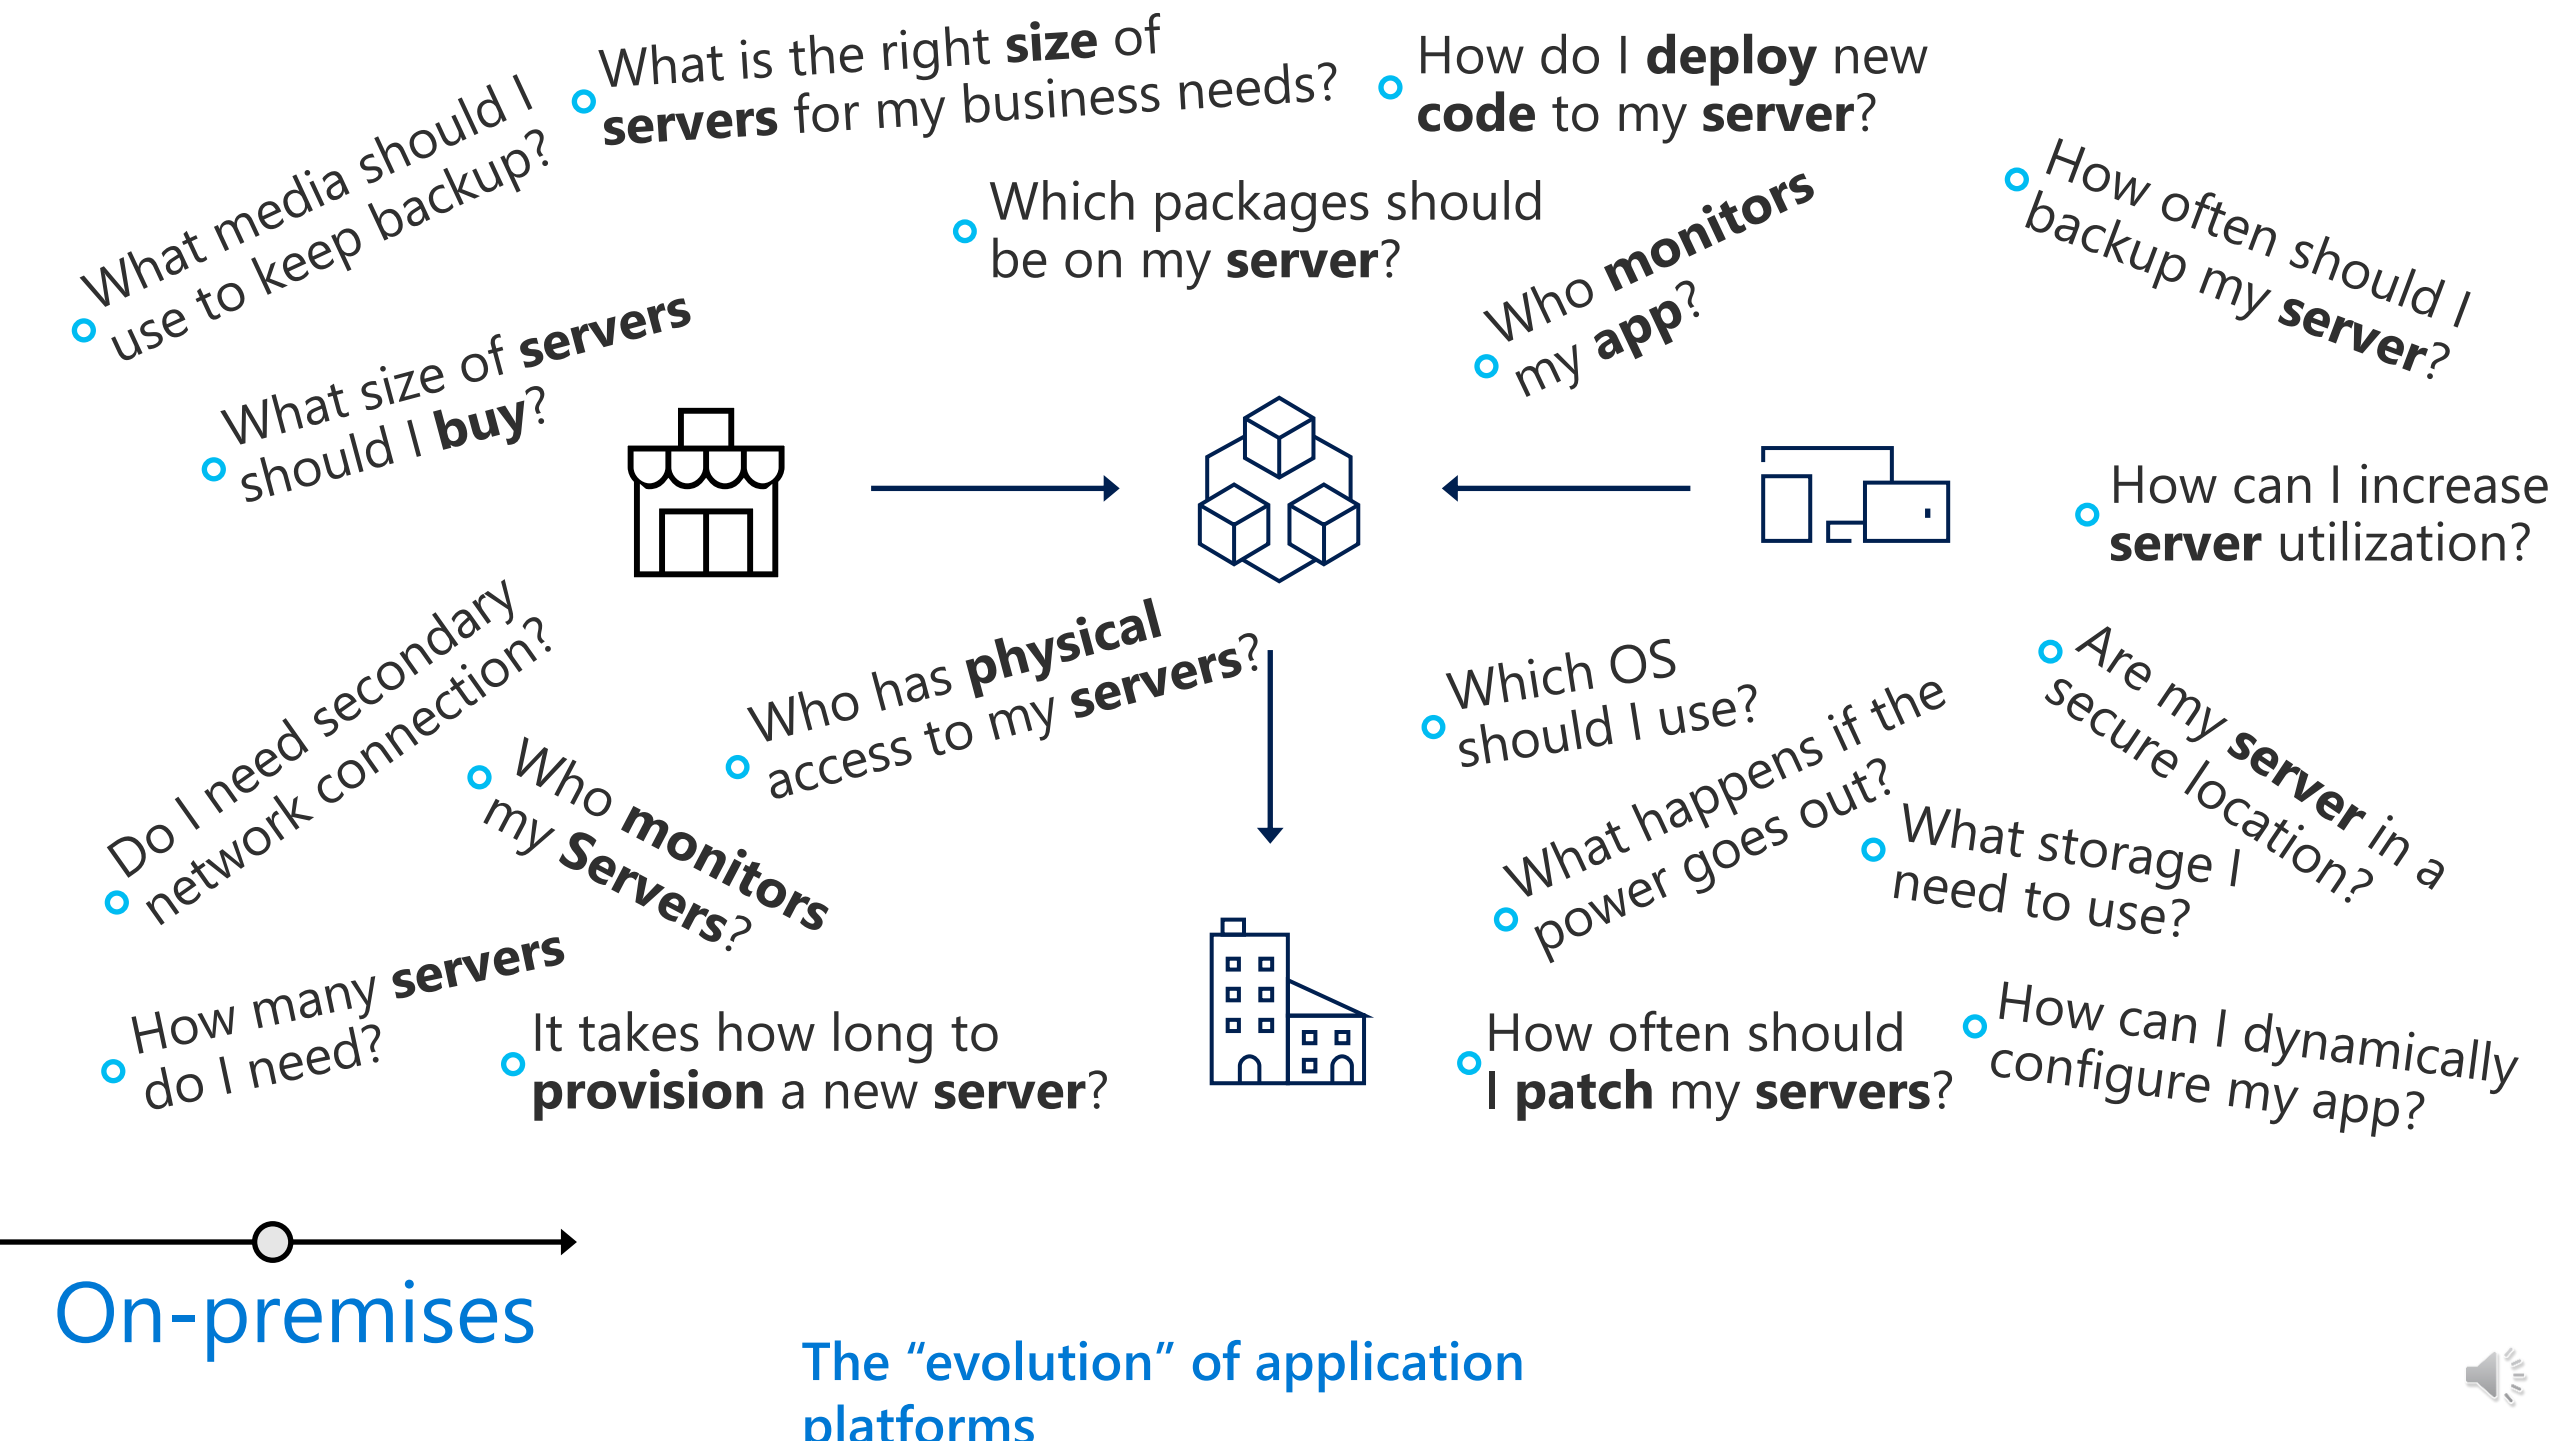

Mobile engagement with Xamarin

Introduction to Serverless

What is the right **size** of **servers** for my business needs?

How can I increase **server** utilization?

How many **servers** do I need?

How can I **scale** my app?

How often should I **patch** my **servers**?

How often should I backup my **server**?

Which packages should be on my **server**?

How do I **deploy** new **code** to my **server**?

Which OS should I use?

Who **monitors** my app?

The "evolution" of application
platforms

What is the right **size** of “**servers**” for my business needs?

How can I increase “**server**” utilization?

How many “**servers**” do I need?

How can I **scale** my app?

On-premises

IaaS

PaaS

The “evolution” of application
platforms

How do I **architect** my app?

Serverless, the platform for cloud native apps

The “evolution” of application
platforms

What is Serverless?

Abstraction
of servers

Event-driven/
instant scale

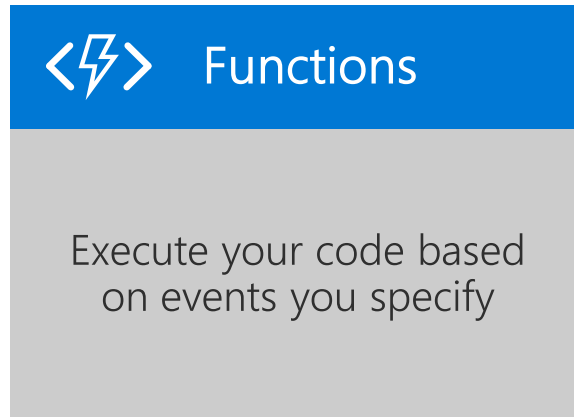

Micro-billing

Demo: Serverless for Elastic Scale

Azure serverless platform components

Azure serverless platform components

 Logic Apps	 Functions
Design workflows and orchestrate processes	Execute your code based on events you specify

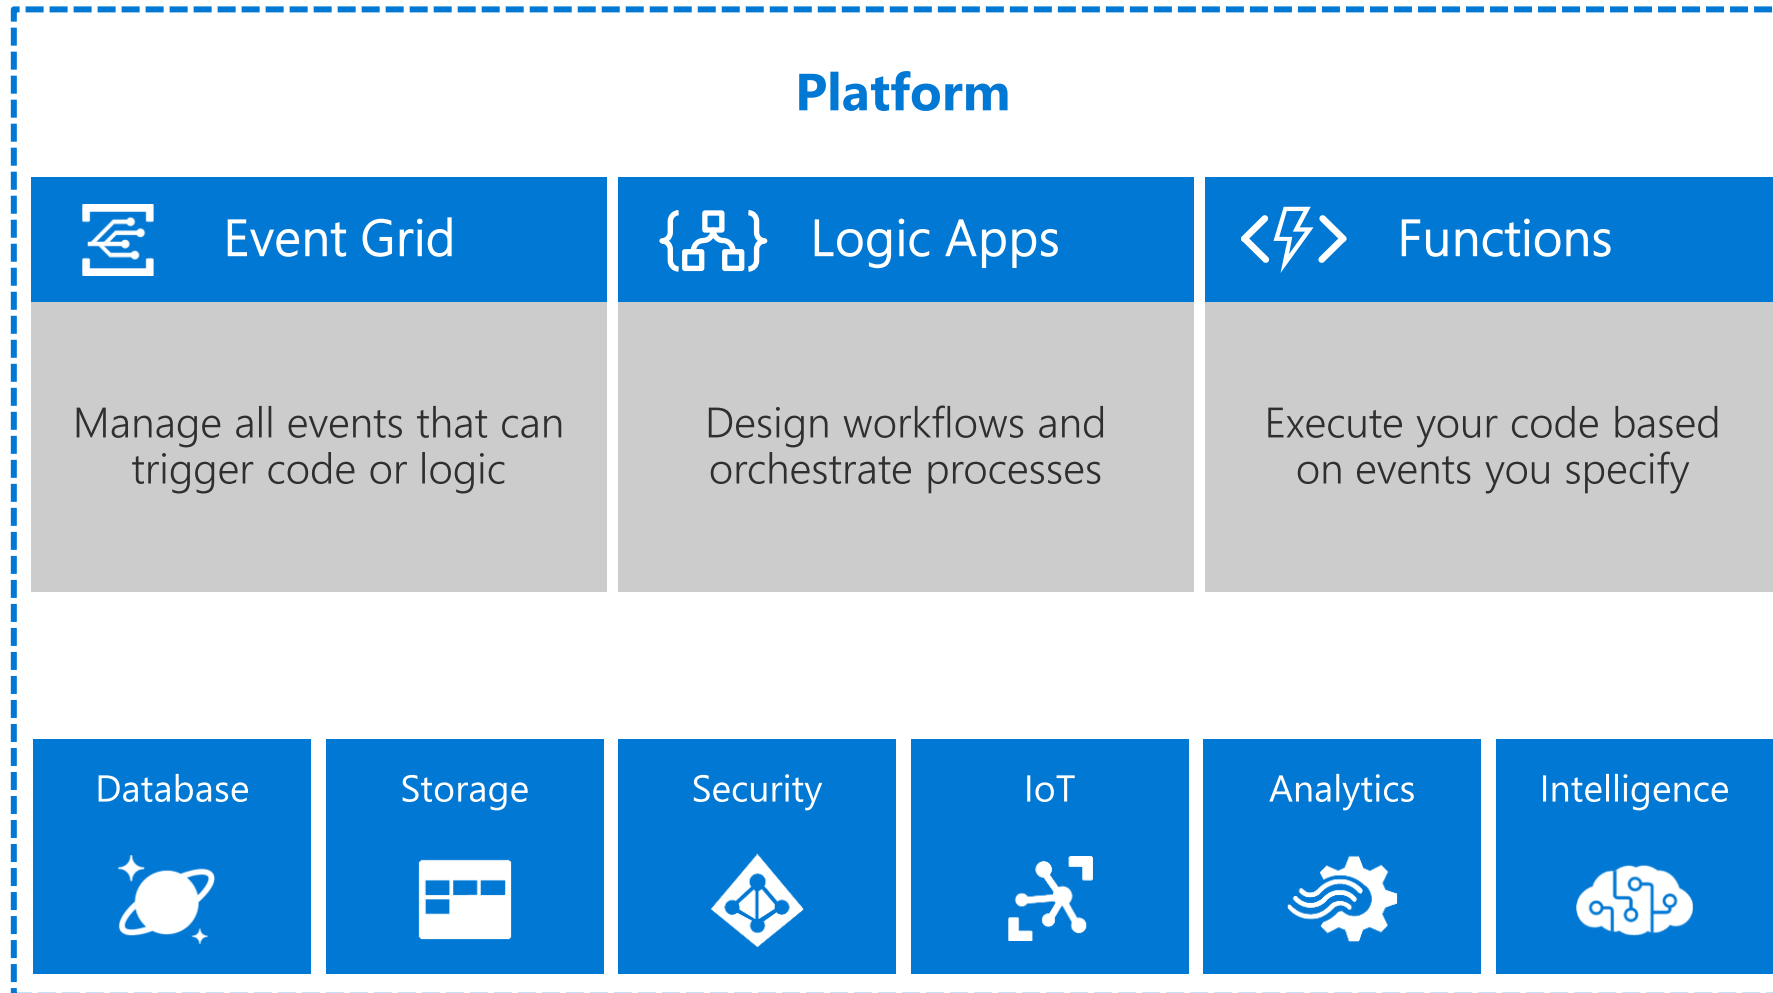

Azure serverless platform components

 Event Grid	 Logic Apps	 Functions
Manage all events that can trigger code or logic	Design workflows and orchestrate processes	Execute your code based on events you specify

Intelligence

Introducing Functions

Code

Azure Functions

Events

Functions secret sauce: triggers and bindings

Triggers

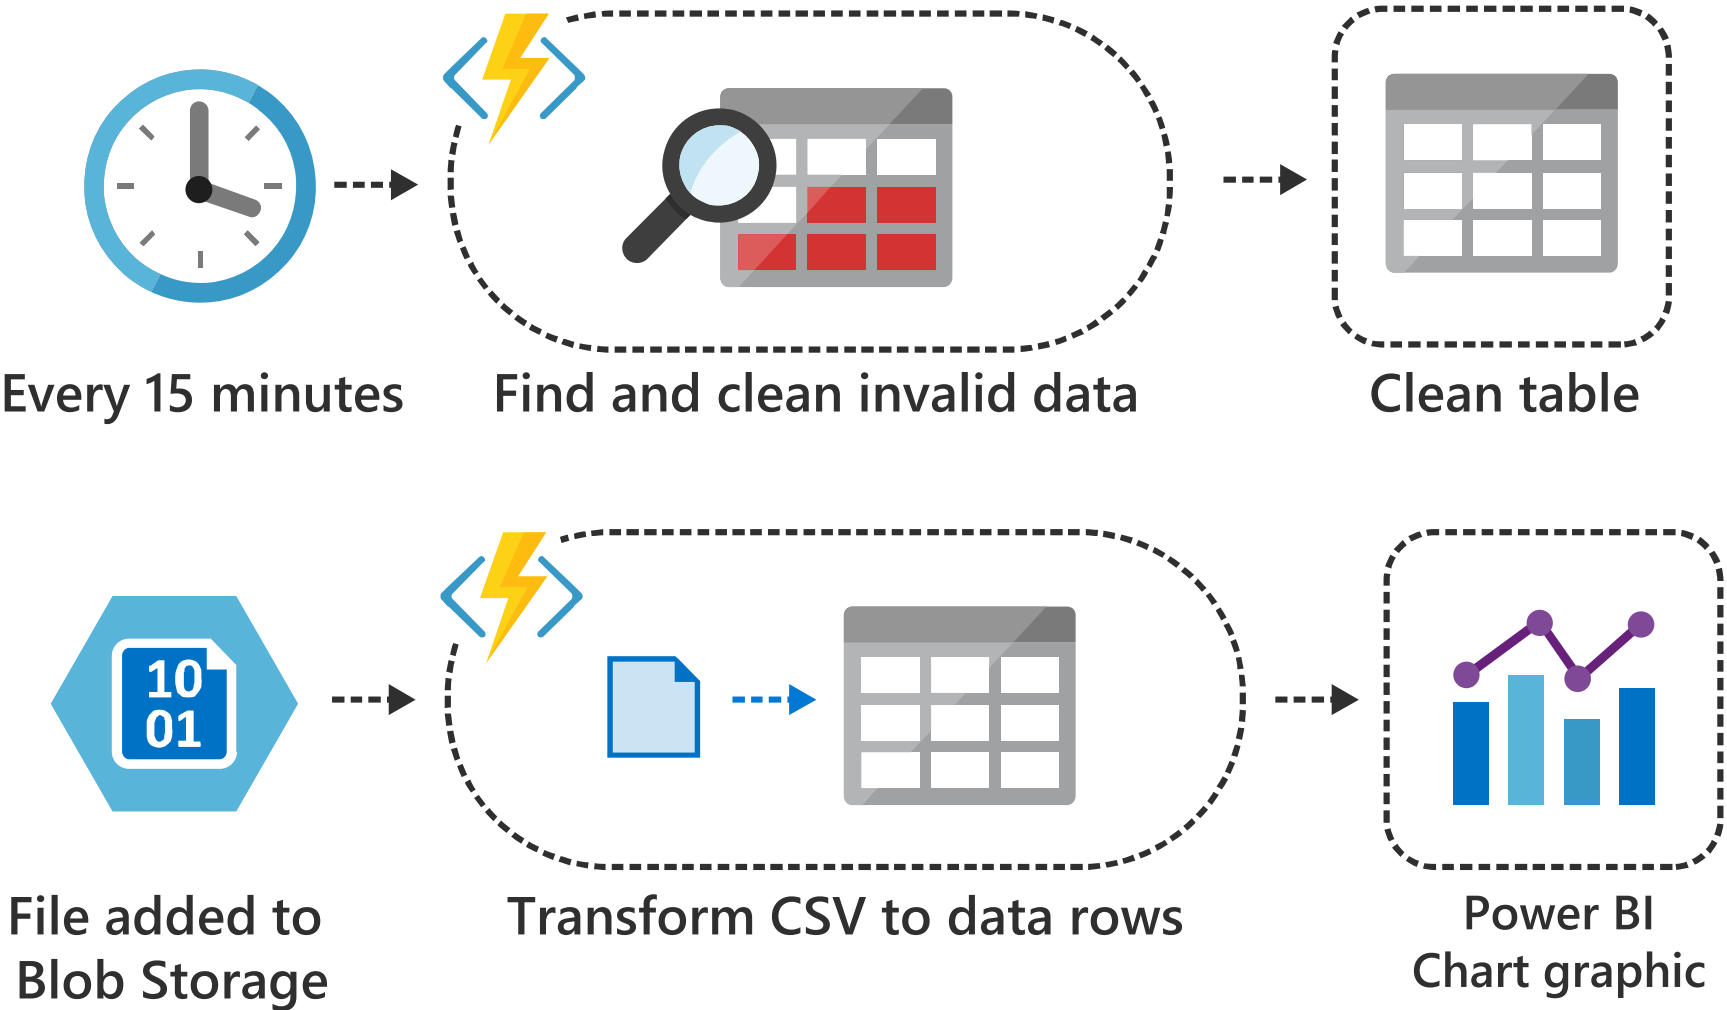

- Blob Storage
- Cosmos DB
- Event Hub
- HTTP
- Queues
- Service Bus
- Timer
- Webhook

Bindings

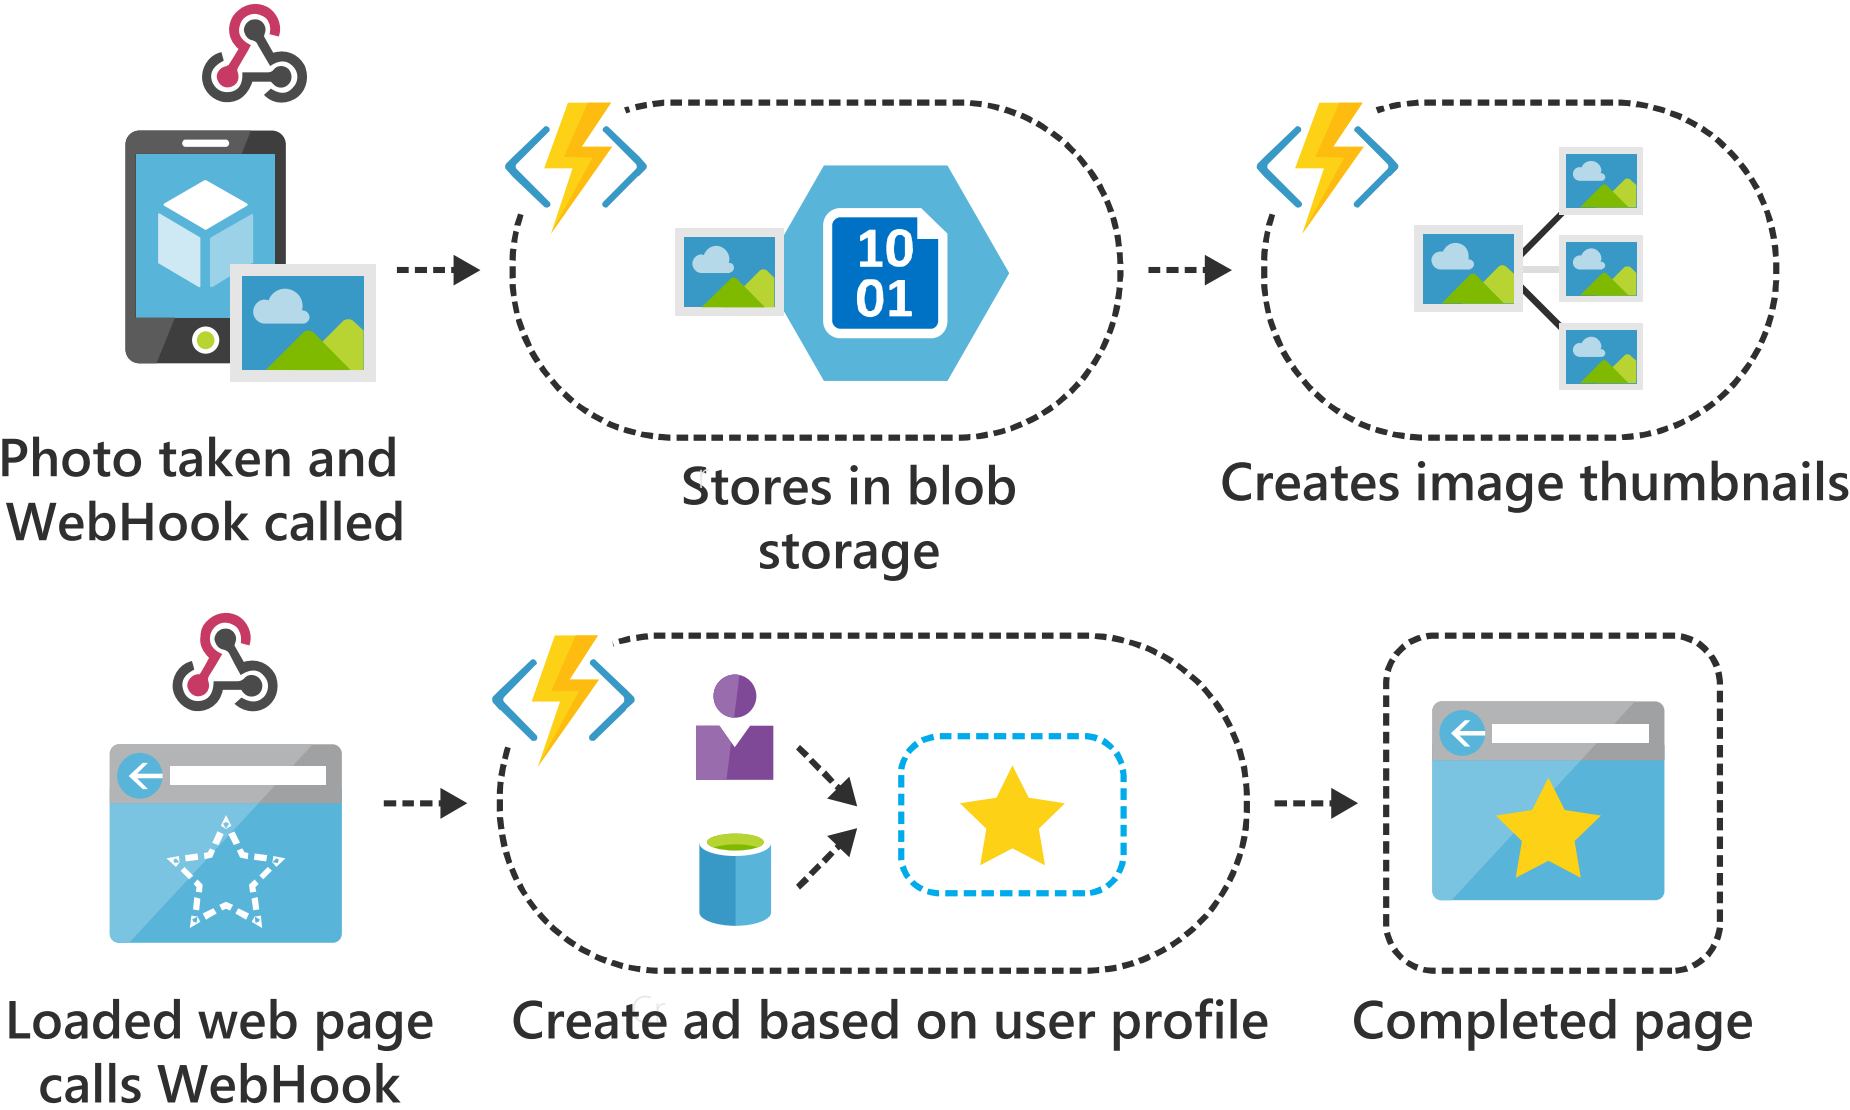

- File
- Table
- Excel
- OneDrive
- Email
- Mobile app
- Notification
- More...

Scenarios

Scenarios

Demo: Thumbnails with Functions

Enterprise Messaging with Event Grid

Modern computing
is all about events

Managing events is important but cumbersome

What if all these events
could be managed and
directed from one place?

Azure Event Grid

Fully-managed
event routing

Near real-time event
delivery at scale

Broad coverage within
Azure and beyond

Backbone of event-driven computing

Benefits

Focus on innovation
and pay per event

Ensure reliability and
performance for your apps

Unlock new scenarios
for your apps

Manage all events in one place

Scenarios

Serverless apps

Instantly trigger a serverless function to run analysis when a new file is added to a blob storage container

Ops automation

Speed up automation and simplify policy enforcement by notifying Azure Automation when underlying infrastructure is provisioned

Application integration

Connects your app with other services. Create an application topic to route your app's event data to any desired destination

But wait...what about?

Event Hubs

- "Point in time" data
- Fast pull
- Replay/strict ordering
- Big data streams

But wait...what about?

Event Hubs

- "Point in time" data
- Fast pull
- Replay/strict ordering
- Big data streams

Service Bus

- Queue for critical items
- Routing
- Workflow
- Transactional

But wait...what about?

Event Hubs

- "Point in time" data
- Fast pull
- Replay/strict ordering
- Big data streams

Event Grid

- Business logic
- Push, not poll
- Handlers
- Guaranteed delivery

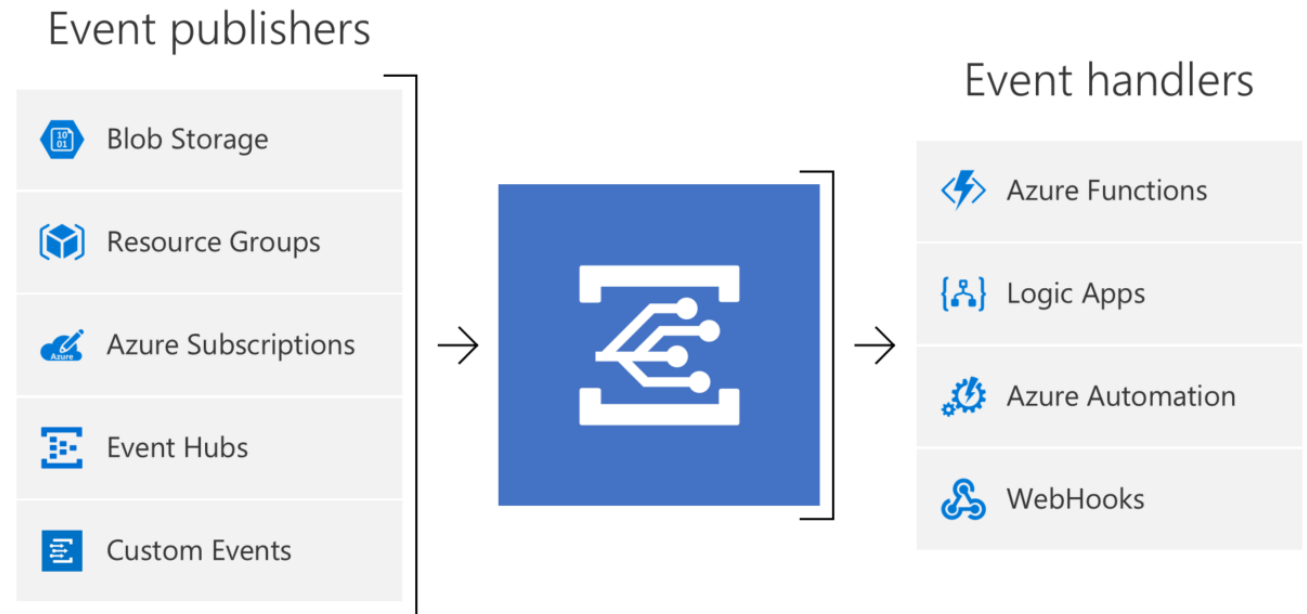

Service Bus

- Queue for critical items
- Routing
- Workflow
- Transactional

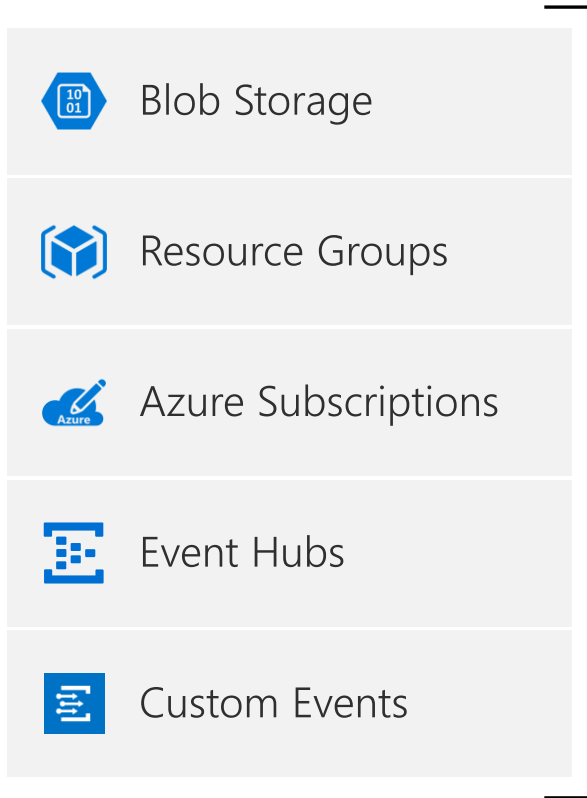

Concepts

- Events:
 - What happened
- Event publishers:
 - Where it took place
- Topics:
 - Where publishers send events
- Event subscriptions:
 - How you receive events
- Event handlers:
 - The app or service reacting to the event

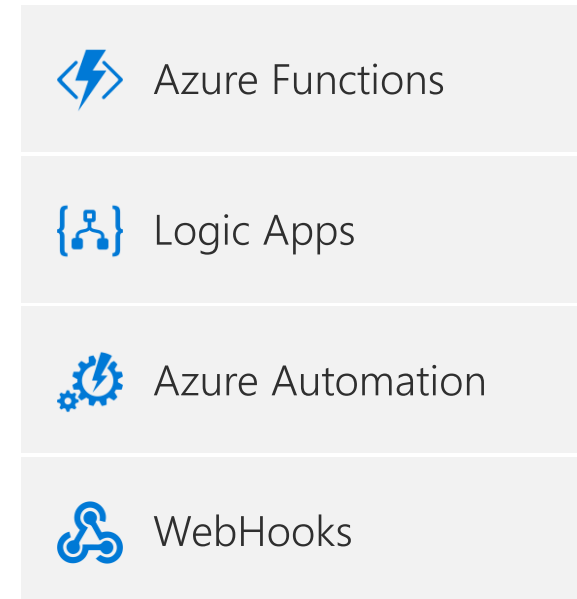

Manage all events in one place

Event publishers

Event handlers

Manage all events in one place

Event publishers

Subscribe to pre-defined system events in Azure or create your own custom topics

Route events to any end-points, Azure or even beyond

Enable filtering and efficient routing of events

Create Event Subscription

Event Grid - PREVIEW

Name

Subscription

Azure Event Grid - Test

Resource group

☐ Use existing

Topic Type

Storage Accounts

Event Types

Raised when a blob is created.

Subscriber Type

Web Hook

Prefix Filter

Sample-workitems/{name}

Optional

Suffix Filter

.jpg

Optional

☐ Filter Case Sensitive

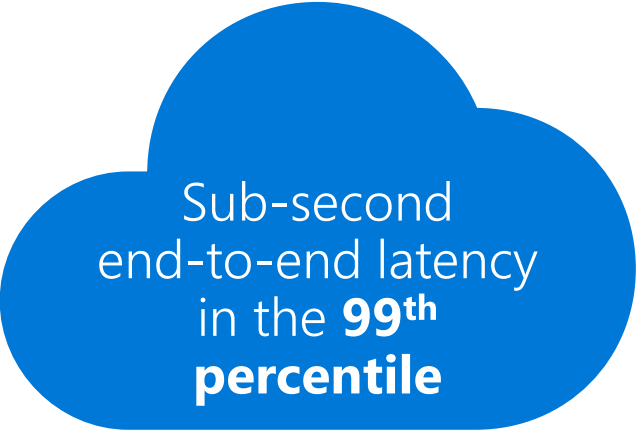

Optional

Create

Event handlers

Ensure reliability and performance in your apps

Sub-second
end-to-end latency
in the **99th**
percentile

Near real-time

10,000,000 events
per second per
region

Massive scale-out

24-hour retry with
exponential back off
for events not
delivered

High reliability

99.99% availability

100,000,000 subscriptions per region

Transparent regional failover

Demo: Trigger Function with Event Grid Event

Enterprise Integrations with Logic Apps

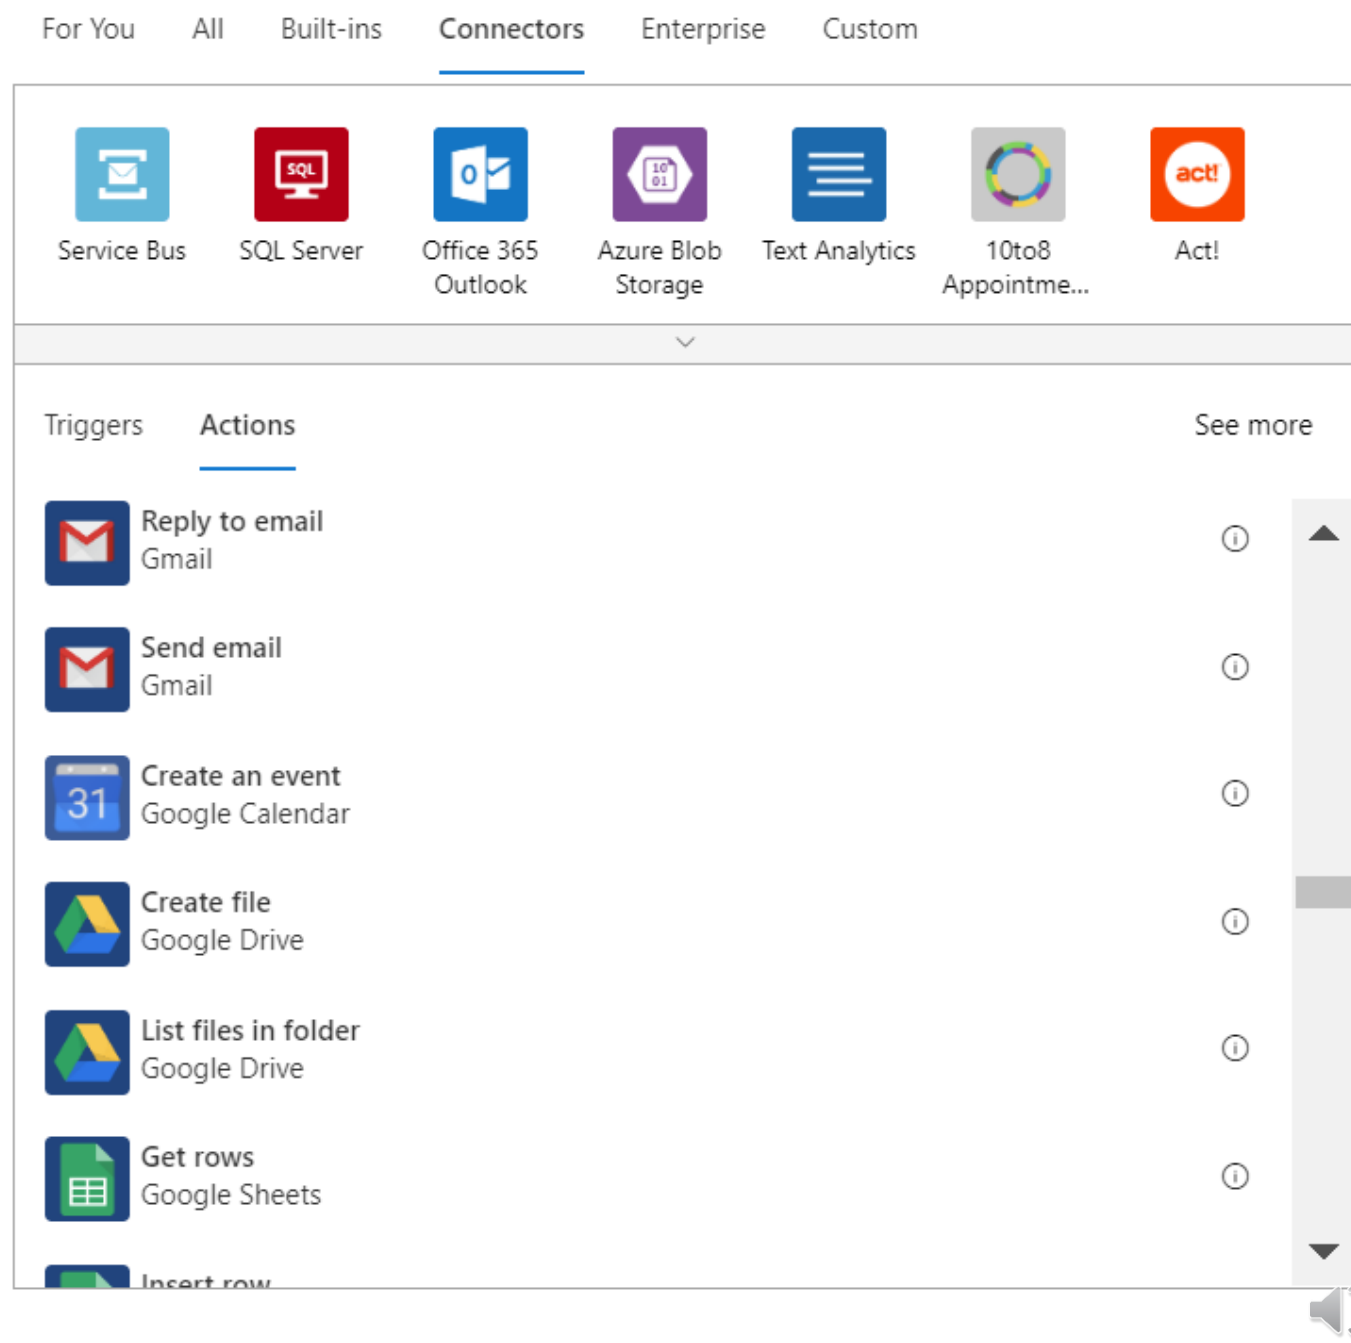

Introducing Azure Logic Apps

Powerful integration and workflow engine born in Azure

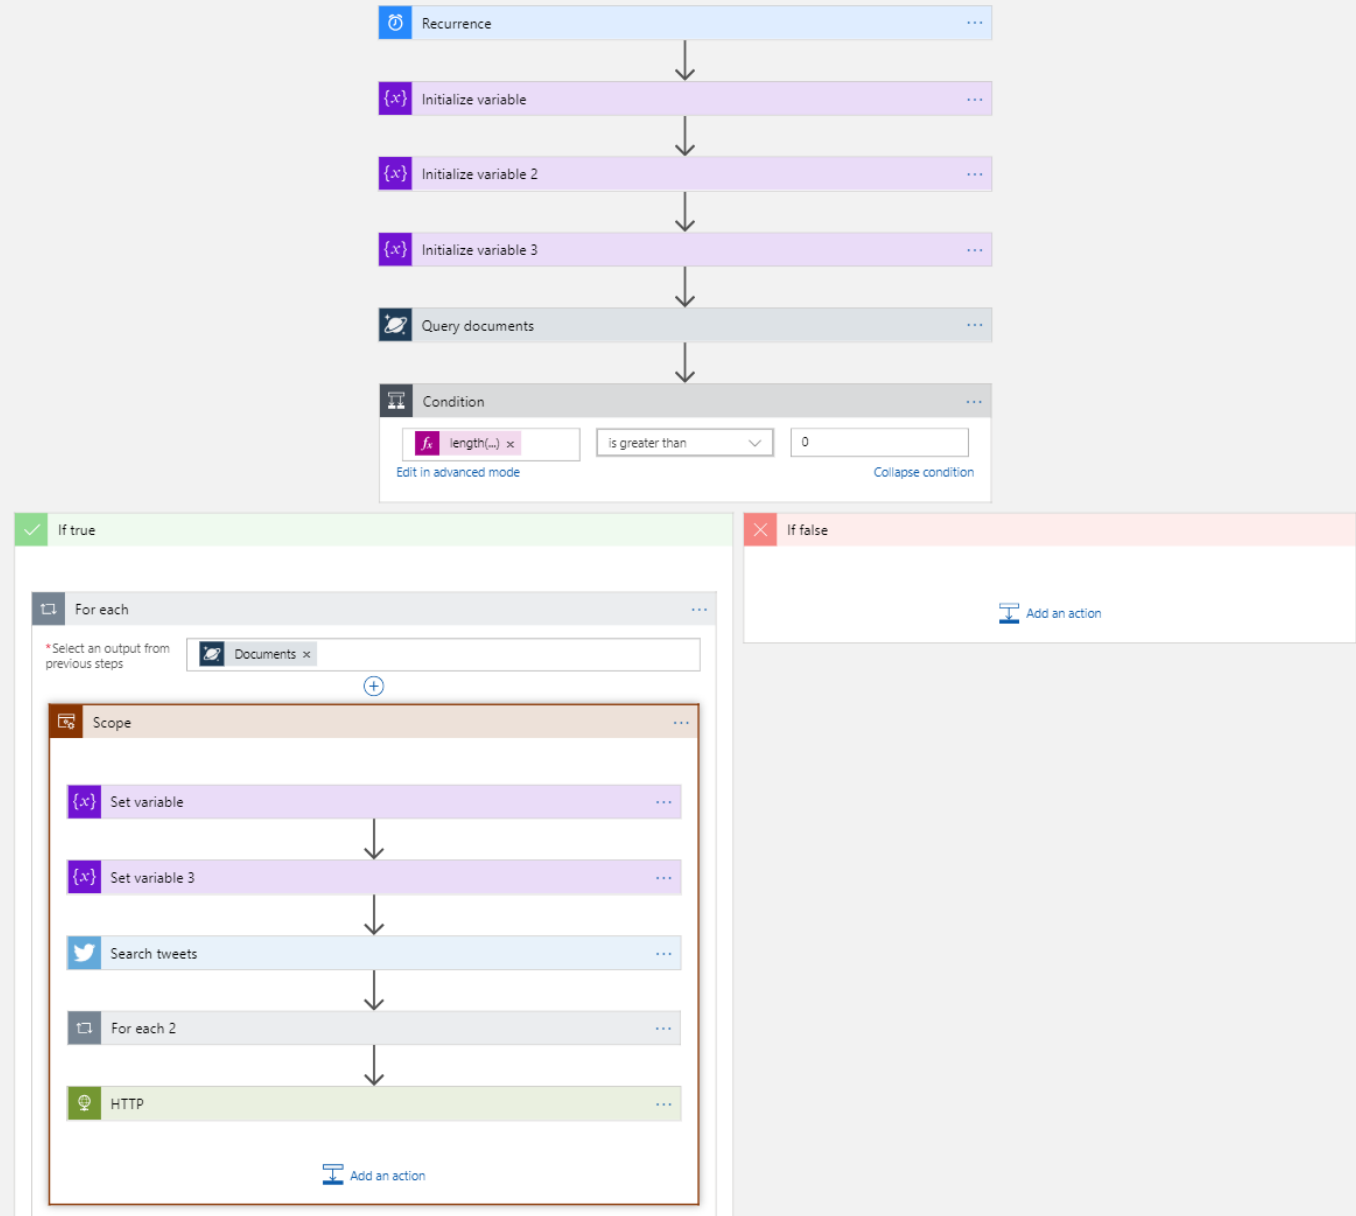

- ⑩ Fast integrations using a visual designer and workflow creation with triggers and actions
- ⑩ Connect applications, data, and services
- ⑩ Connect and orchestrate Azure Functions

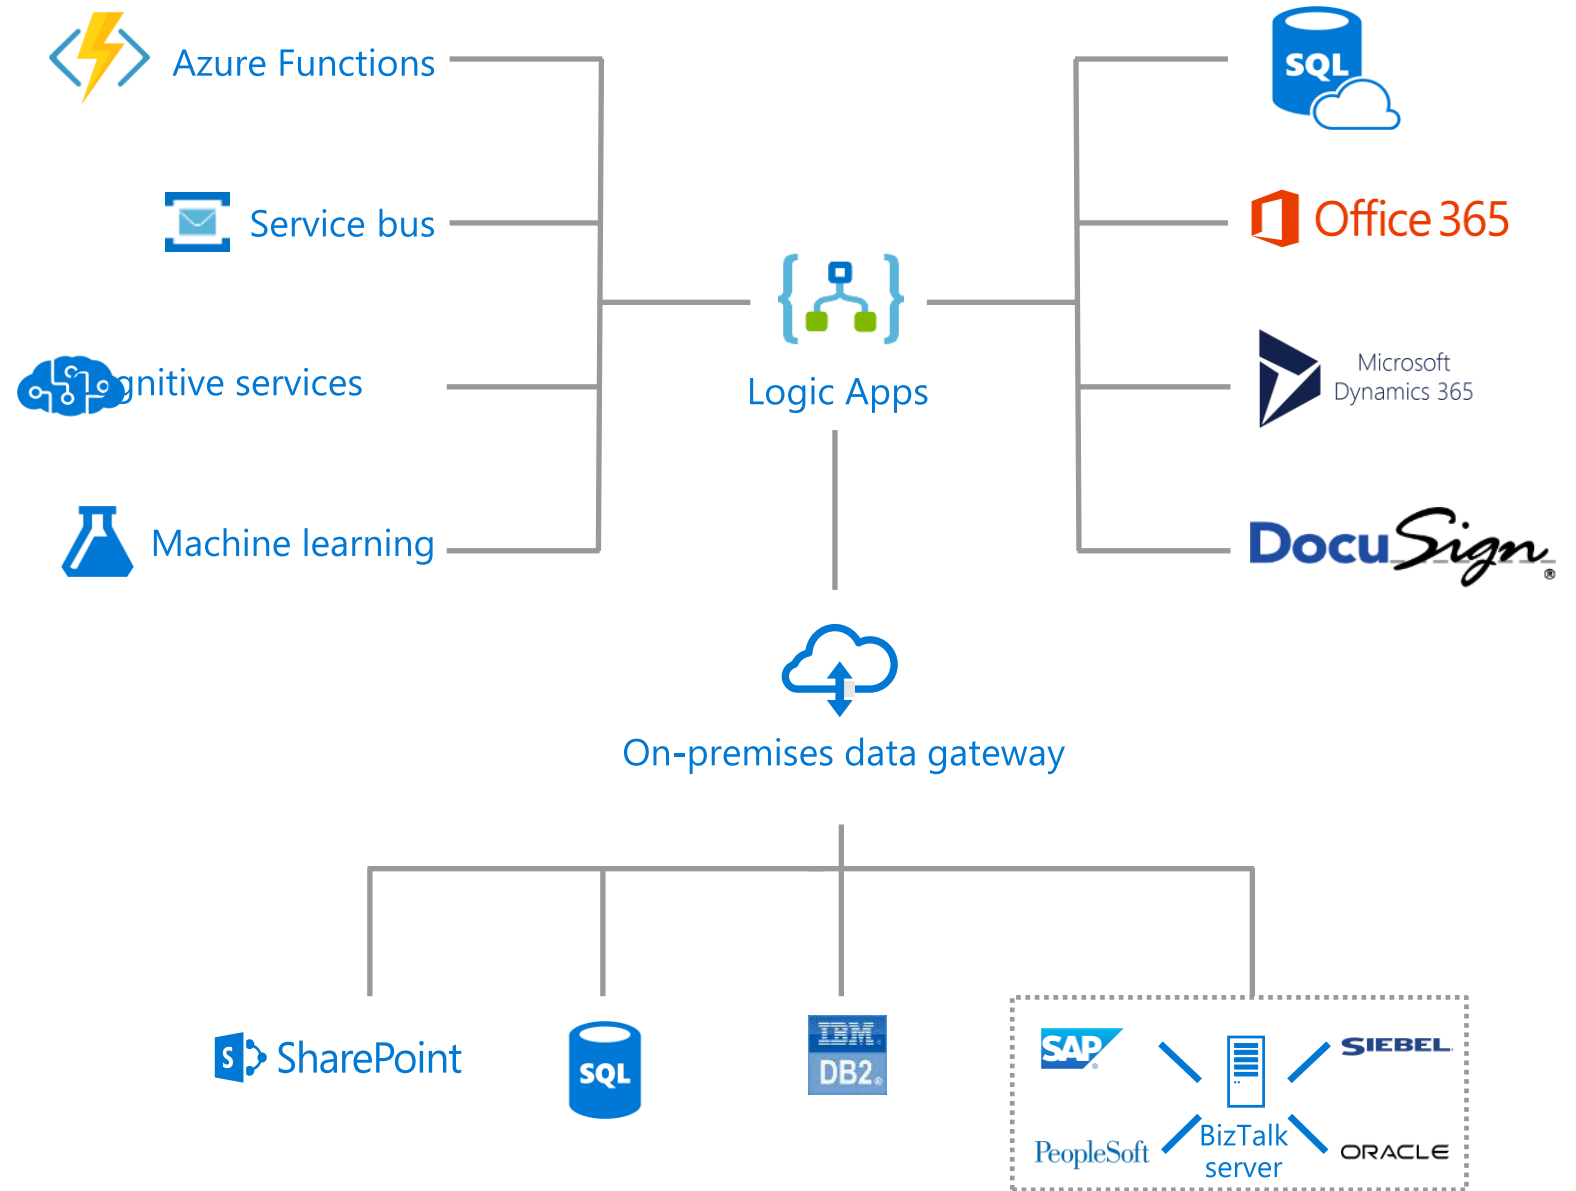

Hundreds of connectors for integrations

Visual workflow designer

Logic Apps connects everything

Demo: Social Media Integration with Logic Apps

Cloud Intelligence with Cognitive Services

Microsoft Cognitive Services

Give your apps a human side

Vision

From faces to feelings, allow your apps to understand images and video

Speech

Hear and speak to your users by filtering noise, identifying speakers, and understanding intent

Language

Process text and learn how to recognize what users want

Knowledge

Map complex information and data in order to solve specific tasks

Search

Access billions of web pages, images, videos, and news with the power of Bing

Labs

Discover, try, and give feedback on new technologies before general availability

Microsoft Cognitive Services

Vision

Video Indexer
Computer Vision
Face
Emotion
Content Moderator
Custom Vision

Speech
